Accelerate migration away from TDM links

• Mitigate on-going cost increases for TDM links

• Conversion of TDM to IP

• Eliminate operational risks with full failover redundancy

• Affordable OPEX-based model

- **Conversion** from SS7 to SIGTRAN

- **Full failover** and redundancy

- **Carrier-grade** device built for long-term reliability

- **Managed service** provided by TNS Operations team

- **Lifecycle maintenance** is provided with periodic systems upgrades and backups.

- **Embedded** call control with programmable call routing of access and manipulation of call parameters

- **Client success** Implementation Manager ensures tasks are completed within agreed timeline

- **Reduced Costs** - More cost-ef client network without TDM infrastructure

- **Simplified Network** - Simpli es communication between different networks and endpoints

- **Managed Service** - Minimizes operational risk by utilizing TNS Operation team

- **Expertise** - Technical capabilities in signaling platforms that provides core network connectivity is handled by TNS

- **OPEX-Based Model** - Flexible solution that scales up and down to any sized network

- **High Touch Customer Service and Support** - World-class 24x7x365 support is included for alarms and events

TNS' pioneering Communications Markets business has a strong heritage which addresses the evolving needs of network operators around the globe. As the industry evolves to IoT and 5G technologies, TNS leads the development of solutions to help carriers navigate a host of infrastructure complexities.
