TNS Spoof Protection

Prevent Call Spoo ng and Gain Peace of Mind

Businesses are usually unaware they have been spoofed until it's too late, and their reputation has been harmed, penalties levied, and their customers defrauded. TNS Spoof Protection solves the problem.

TNS Spoof Protection is an add-on solution to TNS Enterprise Authentication and part of the award-winning TNS Enterprise Product suite. This innovative technology allows enterprises to immediately block unveri ed calls from their registered numbers. As a result, businesses can rest assured spoofed calls will never reach their customers. It also provides valuable, in-depth reporting features to enterprises to track spoo ng activities in real-time.

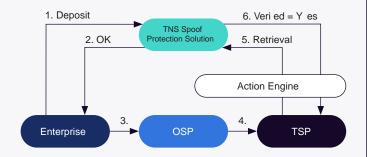

Enterprise Branded Calling + Spoof Protection

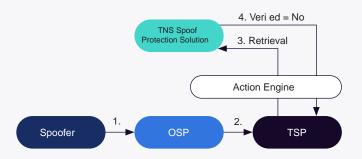

TNS Enterprise Branded Calling enhances outgoing calls with brand details like company name, logo, and call intent. When coupled with TNS Spoof Protection, enterprises have greater certainty only veri ed calls receive full branded treatment, while unveri ed ones are blocked, safeguarding the brand.

Enterprises pre-register their calls with the TNS Enterprise Authentication solution by sending a 'deposit' via the Call Event API. Only calls that can be veri ed by TNS Enterprise Authentication are allowed through to recipients, others are recognized as spoo ng and the appropriate call treatment, such as blocking, can be applied.

Enterprises Deposit (Not Spoofed)

Non-Enterprises Deposit (Spoofed)
